

THE CONCEPT

High-density mobile storage systems maximize square-foot capacity for storage and filing by providing movable storage shelves and movable aisles instead of fixed shelves and fixed aisles. Mobilized units permit high-density space utilization and quick access as needed.

1

Conventional arrangement of fixed shelving units and fixed aisles.

2

Elimination of non-productive fixed aisles compacts material and saves 50% of space to minimize total volume of building.

3

Or, 100% more storage capacity can be added within the same space.
